Getting Started and First Steps

Run this command

A screenshot of a terminal window with a dark background. The title bar at the top shows "TERMINAL" followed by three dots, and on the right, a terminal icon, the text "zsh", and window control buttons. The main area of the terminal displays a prompt character "\$" followed by the command "tsc --init". A white cursor is positioned at the end of the command line.

So we don't have to target files individually.

```

7   type InvestmentData = {
9       annualContribution: number;
10      expectedReturn: number;
11      duration: number;
12  };
13  
14  function calculateInvestment(data: {
15      · initialAmount: number;
16      · annualContribution: number;
17      · expectedReturn: number;
18      · duration: number;
19  }) {} // => result[]
20
21  function printResults(results) {

```

Type 'tsc' to run file

node calculator.js => to run specific file
